

Prevention is the key.

That's why we're here.

FACT: The rate of HIV infection is rising in virtually every segment of the general population. HIV/AIDS is **NOT** going away.

"The number of HIV/AIDS infections in the U.S. has been underestimated by 40% every year for more than a decade."

Centers for Disease Control and Prevention, 2008

Southwest Center for HIV/AIDS serves nearly 70% of Arizona's HIV/AIDS population, providing education and prevention services to more than 30,000 residents each year, including HIV testing, to detect and help prevent the spread of the disease.

Help stop the spread of HIV and improve the quality of life for those living with HIV/AIDS.
