

# Live well. Stay strong.

## That's why we're here.

**FACT:** The rate of HIV infection is rising in virtually every segment of the general population. HIV/AIDS is **NOT** going away.

**"The number of HIV/AIDS infections in the U.S. has been underestimated by 40% every year for more than a decade."**

**Centers for Disease Control and Prevention, 2008**

For 20 years, Southwest Center has been leading the fight against HIV/AIDS by providing:

- **First-response intervention** of help and hope for those newly diagnosed with HIV/AIDS.
- **Support and education** for long-term chronic survivors.
- **Research** that impacts Arizona and beyond to find therapies and drugs that will improve quality of life for those living with HIV.

**Help stop the spread of HIV and improve the quality of life for those living with HIV/AIDS.**
